

PANASONIC

Panasonic 4434 manual call point test key, 10 pcs

Product code 42660 · Fire alarm systems > Field devices > Manual call points

Test key for Panasonic addressable manual call points 4433 and 4439 and the equivalent models 3333 and 3339. The key is used to test the call point and to remove the front cover for glass replacement. Pack of 10.

- > For periodic testing of manual call points
- > Removal of the front cover for glass element replacement and installation
- > Fits models 3333, 3339, 4433 and 4439
- > Pack of 10

Product description

Panasonic 4434 is a test key for manual call points, used for testing and maintaining Panasonic addressable manual call points 4433 and 4439 and the equivalent models 3333 and 3339. The pack contains 10 keys.

During periodic testing, the key is inserted into the hole in the front cover of the call point. The position of the glass element changes, so the call point operates as if activated and the control panel receives a fire alarm. Once the call point indicator has lit up, the key is withdrawn and the glass returns to its normal position. Finally, the fire alarm is reset at the fire alarm control panel, which also switches off the call point indicator, and the call point is ready for use again. The glass therefore does not need to be broken for testing.

Installation and maintenance

The key is also used to remove the front cover of the call point: the two pins of the key are pressed into the holes in the lower edge of the front cover, which releases the front cover from the black body of the call point. The front cover is removed when the call point is installed and when a broken glass element is replaced. Before the glass is replaced, the call point must be disabled at the control panel.

Technical data

Product code	42660
Manufacturer	Panasonic
Product group	Fire alarm systems > Field devices > Manual call points
Compatibility	Manual call points 3333, 3339, 4433 and 4439
Pack size	10 pcs
